

## Green Thinking

Absolute Office Interiors is dedicated to pursuing our policy of doing what we can to abide by the 3 R's, Reduce, Reuse, Recycle to make our world a better place for our families and future.

Starting with our in house policies of printing only what is required, recycling our rubbish where possible (separating waste for correct recycling etc.), using LED lighting, turning off lights and air-conditioning when not required, promoting for sale and using 100% recycled carpet tiles in our new office, sourcing green products for resale like, 100% recycled carpet, 100% recycled fabrics and Environmental Choice approved or similar rated furniture.

Our exclusive furniture products are designed for longevity, restyling, reusing and modularity so that they can be recycled, renewed and redesigned for a different office environment for as long as possible. This way they can be moved from office to office with a minimum of cost and can be reinvigorated with new fabrics etc to create a new theme and because they are modular they can also be reconfigured.

Our exclusive furniture products are manufactured from steel which is recyclable, die cast aluminium which is 100% recycled and 100% recyclable, Laminex melamine wood which has the lowest emission rating of EO, powder coating paint finish also lowers the emission levels of volatile organic compounds (VOCs) dramatically, while packaging materials such as corrugated cardboard and polyethylene stretch wrap form part of a closed loop recycling system, meaning they can be recycled repeatedly.

Going green involves substantially higher costs and more processes so, as a business, we are mindful of how much of this cost our clients will bear without pricing ourselves out of the market, therefore we offer products with and without an eco label until all manufacturers are able to offer competitive products under a green label.
